INTERNATIONAL JOURNAL OF QUANTUM CHEMISTRY, VOL. XV, 799–800 (1979)

Information for Contributors

1. Manuscripts should be submitted to

   Professor P.-O. Löwdin
   Quantum Chemistry Group
   University of Uppsala
   Box 513, S-751 20
   Uppsala 1, Sweden

   All other correspondence should be addressed to

   Journals Department
   John Wiley & Sons, Inc.
   605 Third Avenue
   New York, New York 10016, U.S.A.

2. It is the preference of the Editors that papers be published in the English language. However, if the author desires that his paper be published in French or German, it is necessary that a particularly complete and comprehensive synopsis be furnished in English.
3. Manuscripts should be submitted in triplicate (one *original*, two carbon copies), typed *double spaced* throughout and on one side of each sheet only, on a *heavy* grade paper with margins of at least 2.5 cm on all sides. With the advent of the new U.S. copyright law effective January 1978, the transfer of copyright from author to publisher, heretofore implicit in the submission of a manuscript, must now be clearly stated in writing to enable the publisher to assure maximum dissemination of the author's work. A copy of the transfer of copyright agreement to be used for the *International Journal of Quantum Chemistry* was printed in the January and March 1979 issues. (Additional copies are available from the Editor.) A copy of that agreement, executed and signed by the author, is now required with each manuscript submission. (If the article is a "work made for hire," the agreement must be signed by the employer.)
4. A short synopsis (maximum length 200 words) is required. The synopsis should be a summary of the entire paper, not the conclusions alone, and should preferably be prepared in English, French, and German.
5. The paper should be reasonably subdivided into sections and, if necessary, subsections.
6. Authors are cautioned to type—wherever possible—all mathematical and chemical symbols, equations, and formulas. If these must be handwritten, please print clearly and leave ample space above and below for printer's marks; please use only ink. All Greek or unusual symbols should be identified in the margin the first time they are used. Please distinguish in the margins of the manuscript between capital and small letters of the alphabet wherever confusion may arise (e.g., k, K, κ). Please underline with a wavy line all vector quantities. Use fractional exponents to avoid root signs.

   The nomenclature sponsored by the International Union of Pure and Applied Chemistry is requested for chemical compounds. Unit abbreviations should follow the practices of the American Institute of Physics. Chemical bonds should be correctly placed, and double bonds clearly indicated. Valence is to be indicated by superscript plus and minus signs.
7. The references should be numbered consecutively in the order of their appearance and should be complete, including authors' initials and—for unpublished lectures or symposia—the title of the paper, the date, and the name of the sponsoring society. Please compile references on a separate sheet at the end of the manuscript. Abbreviations of journal titles should conform to the *Bibliographic Guide for Editors & Authors* published by the American Chemical Society.

   References should be limited to literature citations. Explanatory or supplementary material should be treated either as footnotes to text or appendices.

8. All tables *must* be original typescript or in a form suitable for photographic reproduction (see paragraph 10). Each table should be supplied on a separate sheet (not interspersed with text). Please supply numbers and titles for all tables. All table columns should have an explanatory heading.
9. Please supply legends for all figures and compile these on a separate sheet.
10. It is particularly important that all figures be submitted in a form suitable for reproduction. Good glossy photographs are required for halftone reproductions. For line drawings (graph, etc.), the figures must be drawn clearly with India ink on heavy white paper, Bristol board, drawing linen, or coordinate paper with a very light blue background. The India ink lettering of graphs must be large, clear, and "open" so that letters and numbers do not fill in when reduced for publication. Artwork is generally reduced so that the type in the figures is about 2.5 mm high. It is the usual practice to submit drawings that are twice the size of the final reproduction; the maximum final size of figures for this journal is $4\frac{7}{8} \times 7\frac{1}{4}$ inches. If in doubt about the preparation of illustrations suitable for reproduction, please consult the publisher at the address given in paragraph 1.

    It is the author's responsibility to obtain written permission to reproduce material which has appeared in another publication. A copy of the approved permission request should be forwarded to the Editor on acceptance of the manuscript.
11. Senior authors will receive 50 reprints of their articles without charge. Additional reprints can be ordered and purchased by filling out the form attached to the proof.
12. The publisher will do everything possible to ensure prompt publication. It will therefore be appreciated if manuscripts and illustrations conform from the outset to the style of the journal. Contributors should use the *Style Manual* of the American Institute of Physics; papers will otherwise have to be returned to the author for revision.

    Corrected proofs must be sent back to the publisher within two days to avoid the risk of the author's contribution having to be held over to a later issue.

International Journal of Quantum Chemistry
Information for Contributors

1. Manuscripts should be submitted to: Professor P.-O. Löwdin, Quantum Chemistry Group, University of Uppsala, Box 513. S-751 20, Uppsala 1, Sweden.

   All other correspondence should be addressed to: Journals Department, John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10016, U.S.A.
2. It is the preference of the Editors that papers be published in the English language. However, if the author desires that his paper be published in French or German, it is necessary that a particularly complete and comprehensive synopsis be furnished in English.
3. Manuscripts should be submitted in triplicate (one *original*, two carbon copies), typed *double spaced* throughout and on one side of each sheet only, on a *heavy* grade paper with margins of at least 2.5 cm on all sides. With the advent of the U.S. Copyright Law effective January 1978, the transfer of copyright from author to publisher, heretofore implicit in the submission of a manuscript, must now be clearly stated in writing to enable the publisher to assure maximum dissemination of the author's work. A copy of the transfer of copyright agreement to be used for the *International Journal of Quantum Chemistry* is printed on the following page. (Additional copies are available from the Editor.) A copy of that agreement, executed and signed by the author, is now required with each manuscript submission. (If the article is a "work made for hire," the agreement must be signed by the employer.)
4. A short synopsis (maximum length 200 words) is required. The synopsis should be a summary of the entire paper, not the conclusions alone, and should preferably be prepared in English, French, and German.
5. The paper should be reasonably subdivided into sections and, if necessary, subsections.
6. Authors are cautioned to type—wherever possible—all mathematical and chemical symbols, equations, and formulas. If these must be handwritten, please print clearly and leave ample space above and below for printer's marks; please use only ink. All Greek or unusual symbols should be identified in the margin the first time they are used. Please distinguish in the margins of the manuscript between capital and small letters of the alphabet wherever confusion may arise (e.g., k, K, κ). Please underline with a wavy line all vector quantities. Use fractional exponents to avoid root signs.

   The nomenclature sponsored by the International Union of Pure and Applied Chemistry is requested for chemical compounds. Unit abbreviations should follow the practices of the American Institute of Physics. Chemical bonds should be correctly placed, and double bonds clearly indicated. Valence is to be indicated by superscript plus and minus signs.
7. The references should be numbered consecutively in the order of their appearance and should be complete, including authors' initials and—for unpublished lectures or symposia—the title of the paper, the date, and the name of the sponsoring society. Please compile references on a separate sheet at the end of the manuscript. Abbreviations of journal titles should conform to the *Bibliographic Guide for Editors & Authors* published by the American Chemical Society.

   References should be limited to literature citations. Explanatory or supplementary material should be treated either as footnotes to text or appendices.
8. All tables *must* be original typescript or in a form suitable for photographic reproduction (see paragraph 10). Each table should be supplied on a separate sheet (not interspersed with text). Please supply numbers and titles for all tables. All table columns should have an explanatory heading.
9. Please supply legends for all figures and compile these on a separate sheet.
10. It is particularly important that all figures be submitted in a form suitable for reproduction. Good glossy photographs are required for halftone reproductions. For line drawings (graph, etc.), the figures must be drawn clearly with India ink on heavy white paper, Bristol board, drawing linen, or coordinate paper with a very light blue background. The India ink lettering of graphs must be large, clear, and "open" so that letters and numbers do not fill in when reduced for publication. Artwork is generally reduced so that the type in the figures is about 2.5 mm high. It is the usual practice to submit drawings that are twice the size of the final reproduction; the maximum final size of figures for this journal is $4\frac{7}{8} \times 7\frac{1}{4}$ inches. If in doubt about the preparation of illustrations suitable for reproduction, please consult the publisher at the address given in paragraph 1.

    It is the author's responsibility to obtain written permission to reproduce material which has appeared in another publication. A copy of the approved permission request should be forwarded to the Editor on acceptance of the manuscript.

11. Senior authors will receive 50 reprints of their articles without charge. Additional reprints can be ordered and purchased by filling out the form attached to the proof.
12. The publisher will do everything possible to ensure prompt publication. It will therefore be appreciated if manuscripts and illustrations conform from the outset to the style of the journal. Contributors should use the *Style Manual* of the American Institute of Physics; papers will otherwise have to be returned to the author for revision.

Corrected proofs must be sent back to the publisher within two days to avoid the risk of the author's contribution having to be held over to a later issue.

Transfer of Copyright Agreement

(Must be signed and returned to the Journal Editor before the manuscript can be considered for publication.)

The article entitled_____

is herewith submitted for publication in_____
It has not been published before. If and when the article is accepted for publication I, as the author, hereby agree to transfer (for U.S. Government employees: to the extent transferable) to John Wiley & Sons, Inc., all rights under existing copyright laws except for the following, which the author(s) specifically retain(s):

1. The right to make further copies of all or part of the published article for my use in classroom teaching;
2. The right to re-use all or part of this material in a compilation of my own works or in a textbook of which I am the author;
3. The right to make copies of the published work for internal distribution within the institution which employs me.

I agree that copies made under these circumstances will continue to carry the copyright notice which appeared in the original published work. I agree to inform my coauthors, if any, of the above terms.

The *International Journal of Quantum Chemistry* is published monthly in six issues per volume plus symposia by John Wiley & Sons, Inc. Copyright © 1979 by John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10016. All rights reserved. Reproduction or translation of any part of this work beyond that permitted by Sections 107 or 108 of the United States Copyright Law without the permission of the copyright owner is unlawful. Second-class postage paid at New York, New York, and at additional mailing offices.

The code and the copyright notice appearing at the bottom of the first page of an article in this journal indicate the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients, on the condition that the copier pay for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. The per-copy fee for each article appears after the dollar sign and is to be paid through the Copyright Clearance Center, Inc. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Such permission requests and other permission inquiries should be addressed to the publisher.

Subscription price (1980): $400.00 per year. Postage and handling outside U.S.A.: $28.00. Allow four weeks to process a change of address. Back numbers, microfilm, and microfiche are available for previous years. Request price list from publisher.

Claims for undelivered copies must be made no later than three months following the month of publication. Missing copies will be supplied when losses have been sustained in transit and where reserve stock will permit.

Manuscripts should be submitted in triplicate to Professor P.-O. Löwdin, Quantum Chemistry Group, University of Uppsala, Box 518, S-75120, Uppsala 1, Sweden. All other correspondence should be addressed to the Journals Department, John Wiley & Sons, Inc., 605 Third Avenue, New York, New York 10016, U.S.A.

International Journal of
QUANTUM CHEMISTRY

Contents for Volume XVI, 1979, Nos. 1–6

Issue No. 1, July 1979

Proceedings of the International Conference on Quantum Chemistry, Biology, and Pharmacology
Part I

Preface
P.-O. Löwdin 1

Introduction
R. E. Christoffersen 3

Solitons, Bioenergetics, and the Mechanism of Muscle Contraction
A. S. Davydov 5

Organization of Phospholipids in Biological Membranes
G. Govil and R. V. Hosur 19

Are Intermediate States Responsible for Certain Specific Properties of Biological Macromolecules?
G. Biczó and I. Lukovits 31

Conformational Changes and Excitation Energy Transfer in Myosin–Auramine O System
P. G. Bogach, V. L. Zyma, A. M. Shakhovsky, and V. M. Danilova 43

What Can Quantum Chemistry Contribute to Biology?
G. G. Hall 51

Ab initio Molecular Fragment Calculations with Pseudopotentials
R. Gáspár, Jr. and R. Gáspár 57

Electron Pair Correlation Energies for Zn^{2+}
K. Jankowski, P. Malinowski, and M. Polasik 65

Role of Electron Correlation in the Quantum-Mechanical Calculations of the Coulomb Interaction Energy in the DNA Base Pairs
V. A. Kuprievich, Z. G. Kudritskaya, and V. E. Klymenko 71

Multimolecular Clusters: Their Isomerism and Effective Characteristics Evaluated by Quantum Chemistry
Z. Slanina 79

Electronic Factors Affecting Receptor Binding of Dibenzo-*p*-Dioxins and Dibenzofurans
B. V. Cheney and T. Tolly 87

Circular Dichroism of Large Molecules
I. Tinoco, Jr. 111

Some Aspects of the DNA Hypochromic Effect Theory
S. N. Volkov 119

Mechanisms of Electron Transfer through Proteins
E. G. Petrov 133

Conformational Analysis of Double-Helical Polynucleotides
V. E. Khutorsky and V. I. Poltev 153

Carbon-13 Magnetic Resonance Study of Lanthanide-Substituted Muscle Calcium Binding Parvalbumins
D. J. Nelson, A. D. Theoharides, A. C. Nieburgs, R. K. Murray, F. Gonzalez-Fernandez, and D. S. Brenner 159

Theoretical Model Study of the Reactivity of Benzo(a)pyrene Diol Epoxide with the Amino Groups of the Nucleic Acid Bases
R. Lavery and B. Pullman 175

Conformational Possibilities of Double-Helical Nucleic Acids: Theory and Experiment
V. I. Ivanov, V. B. Zhurkin, S. K. Zavriev, Yu. P. Lysov, L. E. Minchenkova, E. E. Minyat, M. D. Frank-Kamenetskii, and A. K. Schyolkina 189

Issue No. 2, August 1979

Proceedings of the International Conference on Quantum Chemistry, Biology, and Pharmacology
Part II

Quantum-Chemical and Semiclassical Calculations of Intermolecular Interactions of Phospholipids
H. Frischleder and R. Lochmann 203

Energy Migration in One-Dimensional Structures with Resonance Interaction
V. K. Fedyanin and L. V. Yakushevich 215

Quantum Chemical and Physicochemical Influences on Structure–Activity Relations and Drug Design
J. J. Kaufman 221

Ab initio Calculations and Absolute Rate Theory. Critical Test for a Series of Elementary Gas-Phase Reactions
P. Čársky and R. Zahradník 243

Role of Entropy in Formation of van der Waals Complexes
P. Hobza, P. Čársky, and R. Zahradník 257

Geometry of Ammonia Molecule in the Lowest Triplet State Estimated Theoretically
D. Jeziorek and B. Żurawski 261

Electrostatic Isopotential Maps for Large Biomolecules
G. Náray-Szabó 265

Excited Electronic States of a Hydrogen Bond: Bifluoride Ion
R. Lozes and J. R. Sabin 273

Ab initio Calculations Including Electron Correlation for the Minimum Energy Path of the $(^1A_1)CH_2 + (^1\Sigma_g^+)H_2 \rightarrow (^1A_1)CH_4$ Insertion Reaction
D. Jeziorek and B. Żurawski 277

Theoretical Studies on Substrate Binding to the Active Site of Carbonic Anhydrase
A. Sawaryn and W. A. Sokalski 293

Intermolecular Charge Transfer in Model Hydrogen-Bonded Systems—Biological Implications
H. Chojnacki 299

Heme Proteins and Metalloporphyrins: Redox Chemistry and Oxygen Binding
D. Dolphin, A. W. Addison, M. Cairns, R. K. Dinello, N. P. Farrell, B. R. James, D. R. Paulson, and C. Welborn 311

Assessment of Reaction Center Special-Pair Chlorophyll Models
G. M. Maggiora 331

Theory of Chemical Reactions in Condensed Media and Its Applications to Biological Processes
S. G. Christov 353

Conformational Properties of Biomacromolecules (Proteins and Nucleic Acids) at Low Temperatures and the Problem of Interaction of Biopolymers with Water Molecules and Ions of Dissolved Salts
E. L. Andronikashvili, G. M. Mrevlishvili, G. Sh. Japaridze, and V. M. Sokhadze 367

Theoretical Conformational Analysis Considering Solvent Effects
H.-J. Hofmann, G. Peinel, and T. Weller 379

Charge Transfer Interactions between Nucleic Acid Bases and Strong Acceptors
G. G. Sheina, E. D. Radchenko, S. A. Egupov, Yu. P. Blagoy, and V. M. Orlov 387

Molecular Electrostatic Potential of the B-DNA Helix. I. Region of the Guanine–Cytosine Base Pair
A. Pullman, C. Zakrzewska, and D. Perahia 395

Information for Contributors 405

Issue No. 3, September 1979

Proceedings of the International Conference on Quantum Chemistry, Biology, and Pharmacology
Part III

Mechanism of Protein Folding
O. B. Ptitsyn and A. V. Finkelstein 407

Some Peculiarities of the Electronic Transfer in Redox Enzymes
G. I. Likhtenstein, A. I. Kotelnikov, A. W. Kulikov, L. A. Syrtsova, V. R. Bogatyrenko, A. I. Melnikov, E. N. Frolov, and A. I. Berg 419

Intermolecular Interactions of Globular Proteins in the Crystal State
A. A. Makarov, D. R. Monaselidze, and N. G. Esipova 437

Modern State of Intermolecular Interaction Theory
I. G. Kaplan 445

Molecular Structure–Biological Activity Relationships on the Basis of Quantum-Chemical Calculations
H. Sklenar and J. Jäger 467

Molecular Orbital Study of Molecular Nitrogen Fixation
L. Turi Nagy, P. Pelikán, M. Liška, M. Haring, M. Čeppan, and M. Breza 485

Generalization of the Second Quantization Operators: Electron Attachment and Detachment Operators
M. Saute and A. Laforgue 501

Possible Connection between Lipophilicity and Steric Substituent Constants
M. Tichý 509

Relationship between Spatial Structure and Pharmacological Activity of a Series of β-Adrenomimetics
B. S. Zhorov and V. A. Govyrin 517

Regularities of the Processes of Radiationless Conversion in Polyatomic Molecules
V. G. Plotnikov 527

Influence of Annelation by Benzene Ring on Electronic Absorption Spectra and on Character of the Singlet π-π^* Transitions at Polynuclear *p*-Quinones
M. Nepraš and M. Titz 543

Theory of the Excitation Spectrum of Nondiagonal Disordered Systems
A. I. Onipko 557

Electronic Structural Properties and Photosynthesis
R. E. Christoffersen 573

Tautomerism of Pyrimidine Bases—Uracil, Cytosine, Isocytosine: Theoretical Study with Complete Optimization of Geometry
R. Czerminski, B. Lesyng, and A. Pohorille 605

Calculations of ^{1}H NMR Coupling Constants for Conformational Studies of Isomeric Pentofuranosyl Nucleosides
A. Jaworski and I. Ekiel 615

Effect of Low-Molecular Impurity on the Melting of DNA-Type Macromolecules
A. M. Kosevich, V. L. Galkin, and M. L. Polyakov 623

Quantum-Mechanical Study of the Interaction of Glyoxal with Arginine
D. Demoulin, A-M. Armbruster, and B. Pullman 631

Model Studies on the Active Site of Carbonic Anhydrase: Ligand Properties and CO_2 Binding
A. Pullman and D. Demoulin 641

Influence of Intermolecular Interactions on the DNA Conformation
G. G. Malenkov, A. V. Gagua, and V. P. Timofeev 655

Recent Developments on the Mechanism of Chemical Carcinogenesis by Aromatic Hydrocarbons
B. Pullman 669

Issue No. 4, October 1979

Proceedings of the International Conference on Quantum Chemistry, Biology, and Pharmacology
Part IV

Excitons and Bose–Einstein Condensation in Living Systems
R. K. Mishra, K. Bhaumik, S. C. Mathur, and S. Mitra 691

Quantitative Approach to Conformations of Proteins
E. M. Popov 707

Photoinduced Electron Transport across Protein-Containing Membranes
B. S. Marinov 739

Bose Condensation of Phonons in Biological Systems
S. A. Moskalenko, E. P. Pokatilov, M. F. Miglei, and E. S. Kiselyova 745

Quantum-Chemical Investigation of Cation Motion Mechanism in Modes of Biological Channels with Phosphate Groups
V. V. Strelko, K. D. Lavrinenko-Ometzinskaja, T. A. Karaseva, and L. V. Pisarzhevsky 753

Theory of Electron Transfer in Donor–Acceptor Pairs
V. A. Zasukha and S. V. Volkov 761

Interrelations between Electronic Structure and Spatial Geometry of Specific Ligands in the Functioning Active Site of Some Pyridoxal-*p*-Dependent Enzymes
V. P. Almazov, Yu. V. Morozov, F. A. Savin, and B. S. Sukhareva 769

Electron-Conformational Interactions and Functioning of Enzyme Molecules
M. V. Volkenstein, I. B. Golovanov, and V. M. Sobolev 777

Interfragment Interactions in Peptide Molecules
M. V. Volkenstein, I. B. Golovanov, and V. M. Sobolev 791

Modeling of the Short-Range Order for Polymers by the Ideal Peak Method
V. V. Shilov, N. E. Kruglyak, and Yu. S. Lipatov 799

Spectroscopic and Photochemical Studies of Model Visual Pigment Chromophores
D. S. Kliger 809

Determination of the Secondary Structures of Proteins by Circular Dichroism Spectra. Calculation of the Protein Basic Circular Dichroism Spectra for Antiparallel and Parallel β-Structures and β-Bends
I. A. Bolotina, V. O. Chekhov, and V. Yu. Lugauskas 819

Electronic Structure of the Pyrimidine and Purine Components of Nucleic Acids in their Ground and Lower Excited Singlet and Triplet States
F. A. Savin, Yu. V. Morozov, A. V. Borodavkin, V. O. Chekhov, E. I. Budowsky, and N. A. Simukova 825

Theoretical Study of Electronic Spectra of the DNA Bases
V. A. Kuprievich and O. V. Shramko 833

Torsional Isomerization of Biologically Active Bicyclic Molecules
A. B. Bolotin, V. A. Bolotin, and V. L. Gineityte 839

Influence of Solvent Structure on the Conformation of the Native DNA

Molecule
E. V. Frisman, S. V. Slonitsky, and A. N. Veselkov 847

Conditions of Formation of Liquid Crystals from Biopolymer Solutions
A. R. Khokhlov 857

Simulation of Intermolecular and Intramolecular Interactions of Nucleic Acid Subunits by Means of Atom–Atom Potential Functions
V. I. Poltev 863

Solvation of Nonpolar Groups of Biomacromolecules
G. N. Sarkisov, Yu. V. Agrafonov, and G. A. Martynov 869

Mechanisms of Charge Separation in Bacterial Photosynthesis
V. N. Kharkyanen, L. N. Khristoforov, V. V. Kukhtin, and E. G. Petrov 877

Orbit–Orbit Interaction in the NO–Fe(II) Hemoproteins Studied by the Low-Temperature Magnetic Circular Dichroism: Dynamic Jahn–Teller Effect Detected by MCD
A. P. Mineyev, Yu. A. Sharonov, N. A. Sharonova, and V. A. Figlovsky .. 883

Quantum-Chemical Investigation of Spatial and Electronic Structure of Verdazyl and its Derivatives
L. N. Markovsky, O. M. Polumbrik, and A. M. Nesterenko 891

Interaction of Water with DNA Single and Double Helix in the *B* Conformation
E. Clementi and G. Corongiu 897

Metabolic Activation of Chemical Carcinogens and Binding of Metabolites with Nucleic Acid Bases
C. Nagata, M. Kodama, T. Kimura, and T. Yamaguchi 917

Estimation of Some Parameters of the Exchange Mechanism of Luminescence Decay
N. M. Bazhin, B. I. Yakobson, and A. I. Burshtein 931

Information for Contributors 937

Issue No. 5, November 1979

Quadrupole Moments, Dipole Quadrupole *A* and Quadrupole *C* Polarizabilities by Means of Perturbation Theory
Ll. Espinoza, A. Toro, and P. Fuentealba 939

Difficulties in the Computation of Physical Observables due to a Truncated CI
A. Meunier and B. Levy 955

Thermodynamic Functions for Vibronic Systems
S. S. Crotov, A. A. Ischenko, and L. S. Ivashkevich 973

Continuum Contribution to Polarizabilities and Scaling
S. Canuto, and O. Goscinski 985

Analytic Perturbation Theory and Localization Phenomena
E. J. Brändas and C. H. Obcemea 993

Dependence of Approximate *ab initio* Molecular Loge Sizes on the Quality of Basis Functions
P. G. Mezey, R. Daudel, and I. G. Csizmadia 1009

Study of the Muffin-Tin Approximation in the Multiple-Scattering Method
L. G. Ferreira, A. Fazzio, H. Closs, and L. M. Brescansin 1021

Valence-Bond Studies of Four-Electron Three-Center Bonding Units. II. FNO, HNO, LiNO, LiON, and HF_2^-
R. D. Harcourt and W. Roso 1033

Electronic Structure, Spectra, and Mechanism of Photodimerization of Pyrimidine Bases
S. K. Srivastava and P. C. Mishra 1051

MCSCF Optimization through Combined Use of Natural Orbitals and the Brillouin-Levy-Berthier Theorem
K. Ruedenberg, L. M. Cheung, and S. T. Elbert 1069

Electronic Rearrangements during Chemical Reactions. II. Planar Dissociation of Ethylene
L. M. Cheung, K. R. Sundberg, and K. Ruedenberg 1103

Tautomerism of Oxopyridines and Oxopyrimidines: Theoretical Study with Complete Optimization of Geometry
R. Czermiński, B. Lesyng, and A. Pohorille 1141

Letters to the Editor

Improved Minimization for the Hylleraas Six-Parameter Wave Function
P. Jolly 1149

Triplet Instability in Semiempirical RPA Calculations of Conjugated Systems Containing Heteroatoms
A. B. Sannigrahi and B. Guha Niyogi 1151

Book Review

Crystals as Giant Molecules. By A. Julg
